

Color Code Labels for FACT

color selection table

For optimal jumper management and ease of installation, these color code labels can be placed on the side of the FACT-elements. The color coding will work in combination with the FIST-GR3 color labels on the frame back plate and frame spools.

1. Select the color code based on the color selection table. Color selection is defined by the mounting position in the frame.
2. Place the color code label on the side of the jumper entry in the FACT- element. Choose the jumper entry located at the spool side (left/right).
3. Check correct label placement: colors on FACT should match the color coding on the frame back plate.
